Green Cross Genetics Lab Pvt.Ltd.(Naranpura)
27/28, Vishwamitra, Opp. Kalupur Bank, S.P. Stadium Rd, Near Golden Triangle, Ahmedabad-380014
Ph. 48910458 Contact No : 079 -49186079, 49187039. Mo: 9925244859 ,9824048882

LABORATORY REPORT

Name	: **Priyansh Patel**	Sex/Age	: **Male / 20 Years**	BirthDay	:
Case ID	: **5093204126**	Ref Id1	:	Mobile	: 9825421676
Sample Type	: SERUM			Passport	:
Reg Date and Time	: 13-Sep-2025 11:33 AM	Ref. By	: Camp Naranpura		
Sample Date and Time	: 13-Sep-2025 11:34 AM	Pt. Loc	: Lab		
Report Date and Time	: 13-Sep-2025 01:05 PM	Bill. Loc.	: CAMP (NARANPURA)		

Parameter	Result	Unit	Biological Ref. Interval

IMMUNOASSAY

B12 LEVEL *Chemiluminescent Microparticle Immunoassay (CMIA)*	580	pg/mL	Healthy Adults :187 - 883

INTERPRETATION
Dietary sources of Vitamin B12 are meat, eggs, milk and milk products. Vitamin B12 requires intrinsic factor for absorption from intestine.
B12 deficiency causes hematological and neurological abnormalities. Decreased serum B12 levels causes increased excretion of methylmalonic acid. The impaired DNA synthesis associated with Vitamin B12 deficiency causes macrocytic anemias. In sever is characterized by abnormal maturation of erythrocyte, myeloid precursors and megakaryocytes in the bone marrow, which results in the pancytopenia.
Withhold Vitamin B12 injection before the blood is drawn. Blood collected after Vitamin B12 Injection interfere with result. Preservatives such as fluorides & ascorbic acid interfere with this assay. Excessive exposure of the specimen to light may alter Vitamin B12 result.

Due to uniformity between kit manifacturers,refrence range and instruments B12results, are not comparable with other labs B12 results, with sample also.for follow up and repeat analysis, it is advisbale to do analysis in same lab again.

25-OH Vitamin D3 *Chemiluminescent Microparticle Immunoassay (CMIA)*	53.40	ng/mL	< 10.0 : Deficiency 10 - 30 : Insufficiency 30 - 100 : Sufficiency > 100 : Toxicity

Source:
Fatty fish, foods fortified with vitamin D like some dairy products, orange juice, soy milk, cereals
beef liver, chesse, egg yolk.
Vitamin D promotes absorption of Calcium and phosphorus and mineralization of bone and teeth.
Deficiency in children- Rickets; Deficiency in adults- Osteomalacia. Also lead to Hypocalcemia and Tetany
Various causes of deficiency are Inadequate exposure to sunlight,Dietary deficiency,Vitamin-D malabsorption,Severe hepatocellular disease,,Nephrotic syndrome,Drugs like anticonvulsants etc.
